The Tender of any Tenderer who has not complied with one or more of the foregoing instructions may not be considered.

- 17.2 The tenderers name, the presence or absence of the requisite tender security and such other details as the Employer or his authorised representative, at his discretion, may consider appropriate will be announced at the time of tender opening.

**18.0 PROCESS TO BE CONFIDENTIAL**

- 16.1 Except the public opening of Tender, information relating to the examination, clarification, evaluation and comparison of tenders and recommendations concerning the award of Contract shall not be disclosed to tenderers or other persons not officially concerned with such process.
- 18.2 Any effort by a tenderer to influence the Employer/Engineer in the process of examination, clarification, evaluation and comparison of tenders and in decisions concerning award of contract, may result in the rejection of the tenderers tender.

**19.0 CLARIFICATION OF TENDERS**

- 19.1 To assist in the examination, evaluation and comparison of Tenders, the Engineer / Employer may ask tenderers individually for clarification of their tenders, including breakup of prices. The request for clarification and the response shall be in writing or by telefax but no change in the price or substance of the tender shall be sought, offered or permitted except as required to confirm correction of arithmetical errors discovered by the Engineer during the evaluation of tenders in accordance with Clause 22.0 herein.

**20.0 DETERMINATION OF RESPONSIVENESS**

- 20.1 Prior to the detailed evaluation of tenders, the Engineer will determine whether each tender is responsive to the requirements of the tender documents.
- 20.2 For the purpose of this Clause, a responsive tender is one, which conforms to all the terms, conditions and specifications of the tender documents without material deviation or reservation. "Deviation" may include exceptions, exclusions & qualifications. A material deviation or reservation is one which affects in any substantial way the scope, quality, performance or administration of the works to be undertaken by the tenderer under the Contract, or which limits in any substantial way, the Employer's rights or the tenderers obligations under the Contract as provided for in the Tender documents and / or is of an essential condition, the rectification of which would affect unfairly the competitive position of other tenderers presenting substantially responsive tenders at reasonable price.
- 20.2 If a tender is not substantially responsive to the requirements of the tender documents, it will be rejected by the Employer, and will not subsequently be permitted to be made responsive by the tenderer by correction or withdrawal of the non-conformity or infirmity. However minor clarifications if required may be asked from the Tenderer.
- 20.3 The decision of the Engineer/Employer as to which of the tenders are not substantially responsive or have impractical / methods or Programme for execution shall be final.

**21.0 EVALUATION OF TENDER**

- 21.1 ***The Employer will, keeping in view the contents of Clause 8.1.1, carry out technical evaluation of submitted technical proposals to determine that the tenderer has a full comprehension of the work of the contract. Where a tenderer's technical submittal has a major inadequacy his tender will be considered to be non-complaint and will be rejected.***
- 21.2 *Technically acceptable tenders will be eligible for consideration of their financial proposals.*

- 21.3 The evaluation of Financial proposals by the Employer / Engineer will take into account, in addition to the tender amounts, the following factors:
- a). *Arithmetical errors corrected by the Employer/Engineer in accordance with Clause 22.0*
  - b). *Such other factors of administrative nature as the Employer/Engineer may consider to have a potentially significant impact on contract execution, price and payments, including the effect of items or unit rates that are unbalanced or unrealistically priced.*
- 21.4 Offers, deviations and other factors, which are in excess of the requirements of the tender documents or otherwise will result in the accrual of unsolicited benefits to the Employer, shall not be taken into account in tender evaluation.
- 21.5 Price adjustment provisions applicable during the period of execution of the contract shall not be taken into account in tender evaluation.

## **22.0 CORRECTION OF ERRORS**

- 22.1 Tenders determined to be technically acceptable after technical evaluation will be checked by the Engineer/ Employer for any arithmetical errors in computation and summation during financial evaluation. Errors will be corrected by the Employer / Engineer as follows:
- a. *Where there is a discrepancy between amounts in figures and in words, the amount in words will govern; and*
  - b. *Where there is a discrepancy between the unit price and the total amount derived from the multiplication of the unit price and the quantity, the unit price as quoted will normally govern unless in the opinion of the Employer / Engineer there is an obviously gross misplacement of the decimal point in the unit price, in which event, the total amount as quoted will govern.*
- 22.2 If a Tenderer does not accept the correction of errors as outlined above, his tender will be rejected and the tender security forfeited.

## **AWARD OF CONTRACT**

### **23.0 AWARD CRITERIA**

- 23.1 Subject to Clause 9.3 and 21.0, the Employer will award, the Contract to the tenderer, whose tender has been determined to be substantially responsive, technically & financially suitable, complete and in accordance with the tender documents.

## **Specification for steel painting works**

### **Protective coating by painting:**

#### **1. Correct surface preparation of the steel to receive paint.**

This is the single most important factor in ensuring good performance, as the presence of rust under the paint film can cause its failure. Removal of rust, oil, grease and dirt is also necessary to ensure adequate adhesion of paint film to the surface.

- a. The minimum requirements of a surface prepared for painting are:
  - i. It should be clean, dry and free from contaminants.
  - ii. It should be rough enough to ensure adhesion of the paint film. However, it should not be so rough the film can not cover the surface peaks.
- b. Surface preparation: any one of the following methods for surface preparation may be used.
  - i. Manual hand cleaning: The cleaning of surface is done with the use of emery paper, wire brushes, scrapers etc. This is adopted for spot cleaning during normal maintenance to remove rust, scale or old coatings.
  - ii. Cleaning with power driven tools: Oil grease are first removed. Heavy scale and rust are then removed by hand tools. Residual rust and mill scales are removed by hammer or rotary action of hand held power driven tools.
  - iii. In case of maintenance painting where only the finishing coat of paint shows signs of deterioration and the primary coat of paint is sufficiently in good condition adhering to the metal firmly and there are no signs of rust, the surface should be washed with lukewarm water containing 1 to 2% detergent to remove salt deposits and grime. After this, the surface is to be dried, lightly wire brushed and sand papered. On this prepared surface only the finishing coat of paint should be applied.

#### **2. Condition for obtaining good painting**

- a) Painting should be done in dry and reasonable warm conditions. The relative humidity should not be above 90%.
- b) Dew frequently condenses on a structure during night and hence painting at night and in the early hours of morning should be avoided.
- c) Painting should be avoided during rainy season and in adverse weather conditions (dust, storm, mist fog).

#### **3. Precaution to be taken during painting of steel structures:.**

- a) Paint should be mixed in small quantities sufficient to be consumed within hour.
- b) Paints should be used within the prescribed shelf life from the date of manufacturer. The quantity of paint procured should be such that it is fully utilized before the period prescribed for its use.
- c) Brush shall not be less than 5cm width and should have good flexible bristles. A new brush before use should be soaked in raw linseed oil for at least 24 hours. The brushes shall be cleaned in linseed oil at the end of each days work.
- d) Dust settled after scrapping shall be cleaned before applying paint.
- e) When the paint is applied by brush, the brush shall be held at 45 degree to the surface and paint applied with several light vertical /lateral strokes turning the brush frequently and transferring the paint and covering the whole surface. After this, the brush shall be used crosswise for complete coverage and finally finished with vertical/lateral strokes to achieve uniform and even surface.

- f) Rags, waste cotton, cloth or similar articles should not be used for applying paint.
- g) The coat of paint applied shall be such that the prescribed dry film thickness is achieved by actual trial for the particular brand of paint. The applied coat of paint shall be uniform and free from brush marks, sags, blemishes, scattering, crawling, uneven thickness, holes, lap marks, lifting, peeling, staining, checking, scaling, holidays and allegaring.
- h) Each coat of paint shall be left to dry till it sufficiently harden before the subsequent coat is applied.
